**BONUS FACT:** Mathematician John Allen Palos calculated that if 3 million people play the game and the average rate of suicide for people age 15 to 24 is approximately 12 in 100,000, then there should naturally be about 360 cases of D&D players who commit suicide... but there weren't. Statistically speaking, Pulling's "trophy list" suggested that D&D drastically reduces the rate of teen suicide.
